PAD System™

MTM (Made-To-Measure)

MTM is a complete mass customization solution with powerful software interactivity. This solution provides intelligent automation that allows you to update several pieces in all sizes simply by entering new measurement specifications in the system.

MTM is also a great solution for Custom-Made Tailoring, as the designer can easily customize a pattern by specifying the personal measurements of any given client.

Retailer or client measurement specifications can be imported from and exported to any common database or spreadsheet.

Main Features:

>> Simple concept of framed mesurement lines related to garment specification sheet

>> Automatic calculation of sewn garment measurements in all graded sizes

>> Sewn measurements take into account closed darts, pleats, shirring and more…

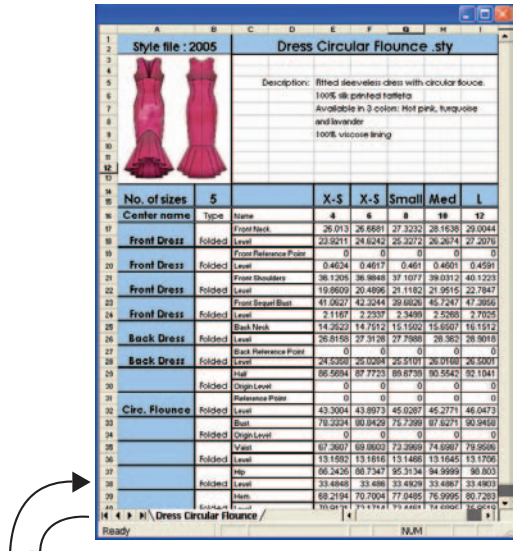
>> Automatic style line grading during pattern development

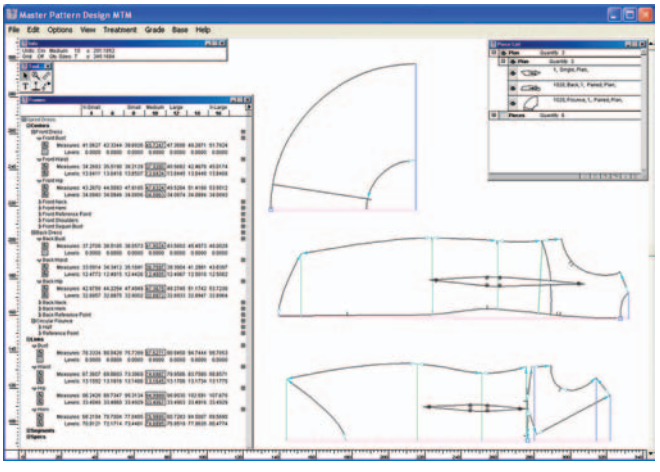
>> Interdependence of pieces can be assigned to maintain measurement consistency between sewn parts

>> Ability to work using total body circumferences and level measurements

>> Ability to program specification requirements

>> Can be combined with PAD System's Clone module





Get your pattern specifications in a snap!
